TextScription

A new way to think about paying for textbooks

Education has become more and more expensive; textbooks are a large part of the cost.

- The average student in the US spends around **$1,200** a school year for books and supplies. (College Board)
- The price of college textbooks has been rising **faster than the rate of inflation** since 1977. (nbc news)
- This causes students to choose between their **wallets or their grades**. A tough decision that can **greatly affect the future** of many young Americans.

Rental is cost effective, but limiting and frankly inconvenient.

- What if you could have access to a *whole library* of resources for the cost of one rental book a semester?
- What if you could find **related textbooks** to supplement your coursework and be a more effective student?
- What if you could explore other interests on a whim and **discover your true calling**?

Our hack:

TextScription

A subscription service that will revolutionize education.

A service that allows students to learn freely

Consider a time where a textbook confused you. It was required for a course and you had to either buy or rent it and it just didn't get the concepts across in a way you could understand. You probably had to pay a lot of money and afterward struggled in the course. Maybe you had to even withdraw. A subscription to **TextScription** is a way to avoid these problems many students have faced.

- It's a subscription service, so it's cheap. **$20-$30 a semester** (different terms and prices apply for winter, summer courses, or single book rentals).
- Access to **a whole library of textbooks** instead of a few needed for specific courses: this allows students to enrich their education with other reliable study materials and different ways of approaching the material.
- A self-study subscription can benefit those who have already entered the workforce, want a cost-effective way to learn new information for their trade, and want to **gain new skills**.
- A subscription style service **gives access to many people** of differing backgrounds to learn **freely** at their own pace from **academically vetted materials**.
